

Numerous ways to test your knowledge, skills and intuition.

Don't panic, exams have never been so entertaining and useful at the same time.

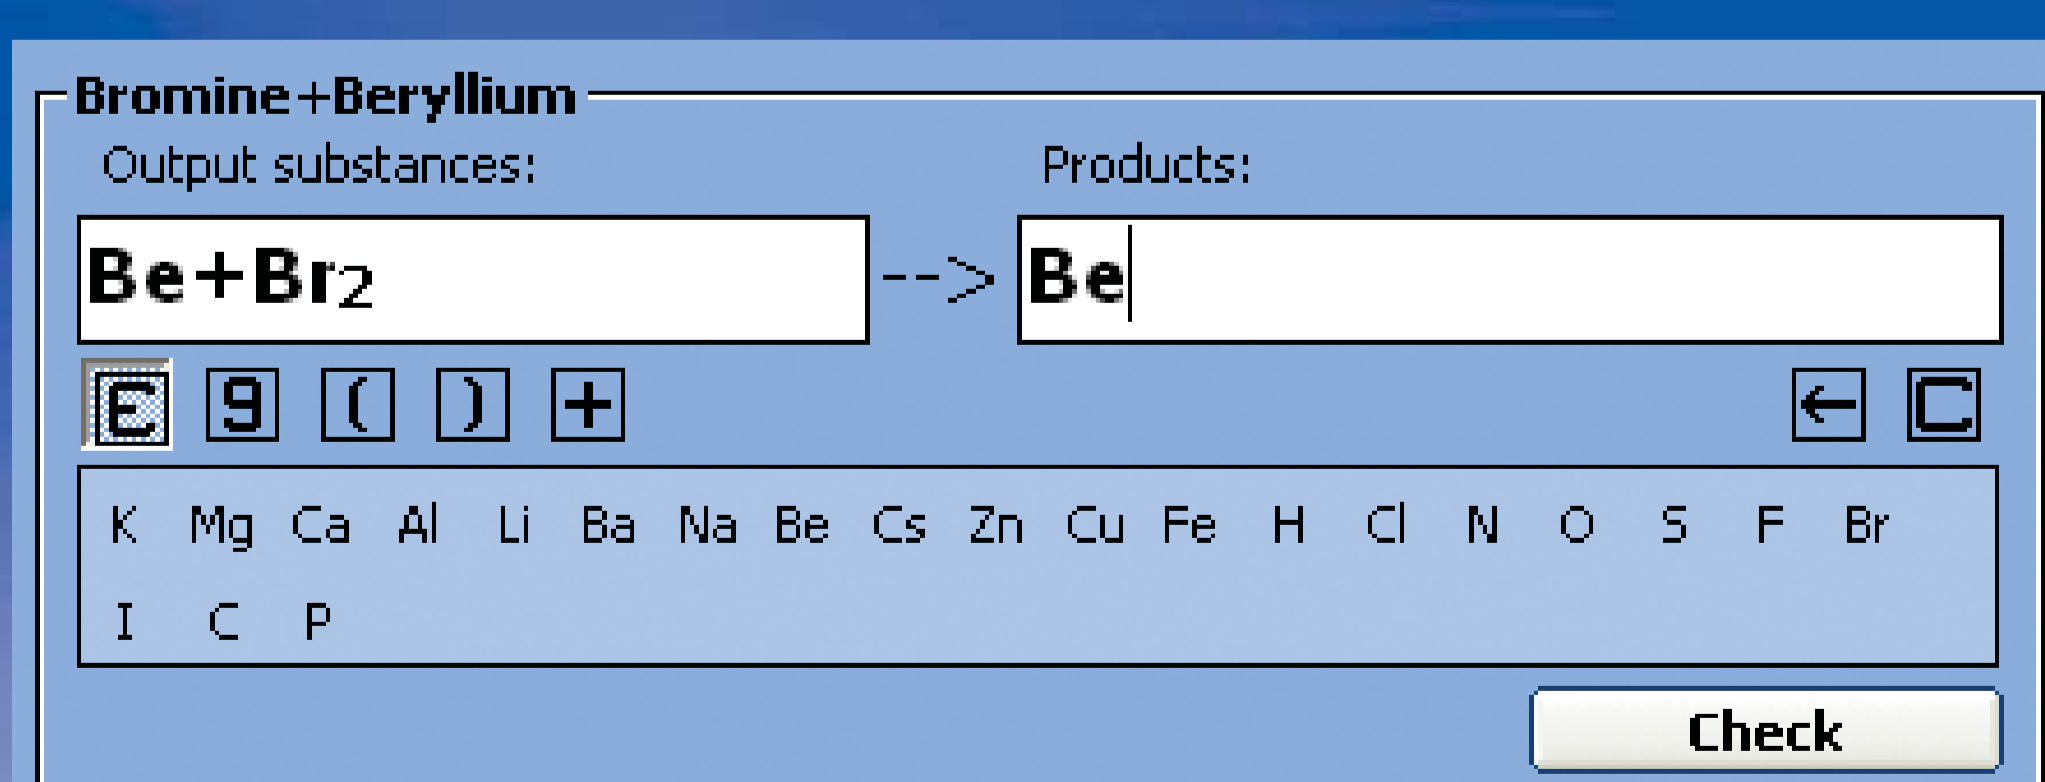

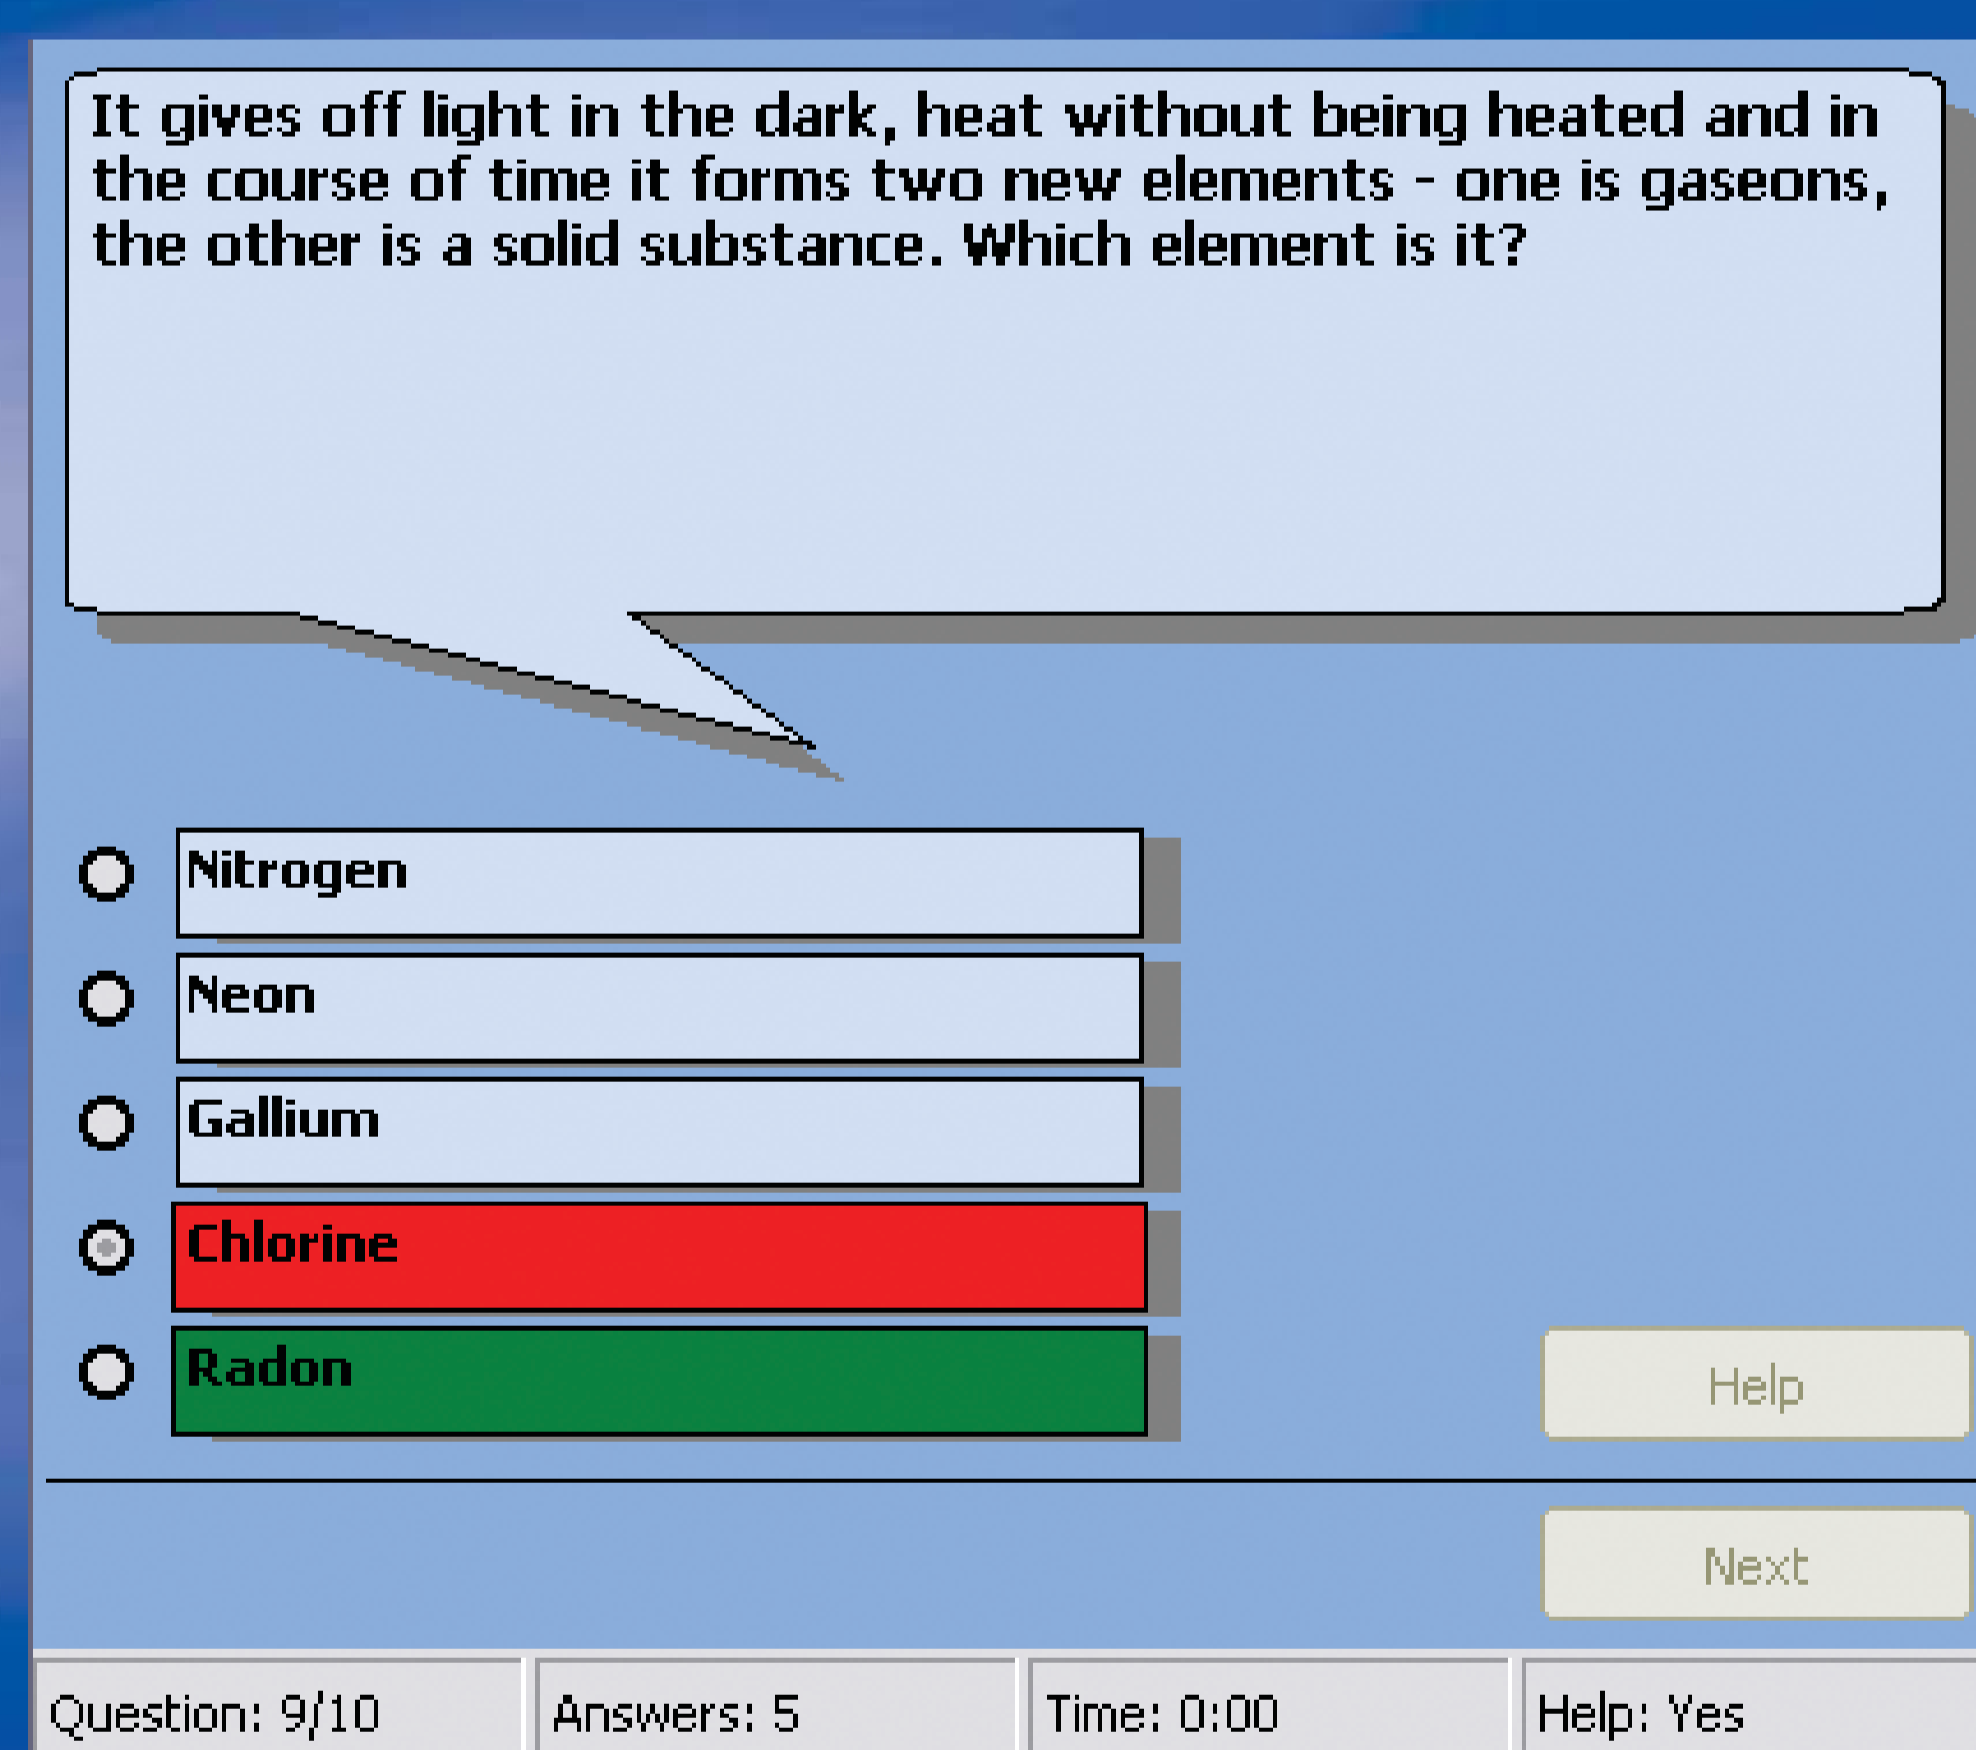

Test yourself in making laboratory exercises. A test comprises three exercises. You either observe a reaction and then answer a question based on that reaction, or you use a tool (ex. litmus) to check something and then ask a question.

You have to watch very attentively in order to answer correctly.

A way to test yourself and meanwhile learn something interesting. You choose the total number of questions, the number of answers to multiple-choice questions, the time, and whether to use help. After you mark an answer you see whether it is correct or not.

When you have answered all the questions you get a complete statistic on your test and a mark on your knowledge.

Can you solve equations? Not math equations, but chemical. You can check your skills with the Equations Manager. First, you select two substances which can react together. Then you have to write the product(s) of the reaction and equalize the equation. If you have a mistake

somewhere you can see where the mistake is – either in the output substances or in the products.
